1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Tim Sullivan on 8/1/2005.

2. The application has been amended as follows: The claims 9 and 19 have been amended as follow.

9. A system for providing a synchronization pattern for use in a wireless communications system comprising:

a transmitter configured to transmit information over a wide area on a predetermined schedule;

a mobile device including a receiver, the receiver being configured to receive the transmitted information; and

a broadcast signal, transmitted by the transmitter and including a segmented information signal that further includes a distributed synchronization pattern and a distributed frame index wherein the distributed synchronization pattern defines boundaries between groups of segments in the segmented information signal and wherein the distributed frame index identifies a particular group of segments in the segmented information signal.

wherein each segment of the segmented information signal further comprises:

a header, including one or more marker bits, a portion of the distributed synchronization pattern, and a portion of the distributed-segment frame index; and

a payload, including data.

19. A computer-readable medium encoded with a data structure for communication stream synchronization in a communications system, the data structure comprising a plurality of segments of data, wherein each segment includes at least two data fields, a

synchronization pattern field and an index field, wherein the synchronization pattern field includes a portion of a synchronization pattern that is distributed over each segment of a segmented information signal, wherein the distributed synchronization pattern defines boundaries between groups of segments in the segmented information signal synchronization pattern field and wherein the index field includes a portion of a segmented index that is distributed over a particular group of segments in the segmented information signal, wherein the segmented index distinguishes the particular group of segments from other groups of segments. ~~wherein a portion of a synchronization pattern is included in the synchronization pattern field of each segment, and a portion of an index that distinguishes the data stream from other data streams is included in the index field of each segment.~~

3. The following is an examiner's statement of reasons for allowance: The prior art of the record fails to disclose the steps of distributing the synchronization pattern over a segmented information signal, wherein the distributed synchronization pattern defines boundaries between groups of segments in the segmented information signal and distributing a segmented index over a particular group of segments in the segmented information signal, the segmented index distinguishing the particular group of segments from other groups of segments in combination of other limitations recited in claims 1,4,9,14 and 19.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to AJIT G. PATEL whose telephone number is 571-272-3140. The examiner can normally be reached on MONDAY-THURSDAY.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Wellington Chin can be reached on 571-272-3134. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
